

SolidFire C-Series Storage Node Installation and Setup Instructions

Prepare for installation | 1

In the box

SolidFire C-Series

Power cables (2)

Slide Rail Kit
Two UCSC-RAILB-M4 Ball Bearing Rails
Cisco part UCSC-RAILB-M4

You provide

Rack space
1U per node

10GbE network cables (2)
Part number
X-SFP-H10GB-CU5M-R6

**1GbE network cable for the
dedicated management port
(at least 3)**

Part number X6562-R6 (5m).

**Monitor with a VGA connection
and keyboard with a
standard USB connection**

Windows client

Install hardware | 2

1 Install hardware

Install the rails and the node following the instructions for [Installing a node in a rack](#) in the [Cisco UCS C220 M4 Server Installation and Service Guide](#).

2 Cable the node

10 GbE cables
(PN 112-00299 or 112-00300 or 112-00301)

- 1 Connect 10GbE cables to the storage network switch.

Ethernet cables
(PN 112-00196)

- 2 Connect 1GbE cables to 1GbE management switch.
- 3 Connect 1GbE cable to out-of-band management (DHCP) switch.

Power cables

- 4 Connect both power cords to the node.
- 5 Plug the power cords to a suitable power outlet.
- 6 Power on the node.

FRONT VIEW

Configure the node | 3

1 Configure the node using Terminal User Interface (TUI)

- Attach keyboard to the USB port and monitor to the VGA port on the node.
Note: The node should be powered on.
- Refer to the [SolidFire Element Setup Guide](#) for instructions on [Configuring Nodes Using the TUI](#).

2 Create a new cluster or add a node to an existing cluster using the Element OS WebUI

- From a Windows client on the same network as the newly configured node, access the Element OS by entering the node's IP address.
- Refer to the [SolidFire Element Setup Guide](#) for instructions on [Creating a New Cluster](#).
